

Addition game 20.4.20

What you need

Number cards 1-10

20 small items – could be lego bricks, coins, stones etc

A plastic cup or bowl

Your homework book and pencil

What to do

1. Choose a number card and count out that many objects into a cup or bowl.
2. Leave the number card next to the pot to help you remember how many things there are in the pot.
3. Choose another number card and count out that many objects.
4. How many objects have you got altogether? What will you do to find out?
5. Now show in your homework book what you have done using pictures or numbers.
6. Put the cards and objects back and do it all again.

Have fun playing the game.

There is a link on the web-page to watch to help your child understand what to do.

Extension. How many different ways can you make the number 10 – I showed 2 ways in the film clip. Can you find all the ways to make 10? How do you know you have all the different ways – can you prove it?
