

## **Whole /part model**

You will need small objects for counting, the whole part model sheet or 3 circles or plates, pencils or crayons and your workbook.

1. Count 5 objects into the top circle.
2. Split the 5 objects between the 2 circles underneath.
3. Show on the whole/part model sheet or in your workbook what you have done using marks or numerals.
4. Find other ways to make 5.
5. How many ways have you found?
6. Repeat for other numbers to 10.

### Extension activities

- Look at all the ways you have made 10. How do you know you have found all the possible ways? Can you explain this to someone at home?
- Repeat the activity for other numbers to 20 – remember to use objects first before using numerals

Watch the film clip on the webpage to help you with this activity.
