

## **“All About.....”**

You will need small objects for counting, 3 circles or plates, pencils or crayons and your workbook.

1. Choose which number you are going to find out about – 6, 8 or 12 and write that in the middle of your page.
2. Can you draw that many objects?
3. Can you think of something that is represented by that number? – eg a bee has 6 legs.
4. Can you show how to share that number of objects fairly between 2 or 3 people?
5. Can you use the part/whole model to represent that number in different ways?
6. Can you use those different ways to help you write addition and subtraction number sentences?
7. What else can you do to show that number?

Extension

- Choose other numbers to make “All About” sheets for.

Watch the film clip on the webpage to help you with this activity.
