

# Amphibians and Insects

frog

The tail \_\_\_\_\_ completely and the froglet starts to eat insects. In 2-4 years it will become an adult and will \_\_\_\_\_.

The tadpole grows \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

The female lays a mass of \_\_\_\_\_ that are fertilised by the male.

After \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

The tadpole swims and eats \_\_\_\_\_. It breathes through \_\_\_\_\_.

The tadpole develops \_\_\_\_\_ and hind legs.

butterfly

Fertilised eggs are laid by the \_\_\_\_\_.

The eggs hatch \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

The caterpillar forms a hard case around itself called a \_\_\_\_\_.

The \_\_\_\_\_ butterfly breaks out of the chrysalis and \_\_\_\_\_.
