

## Owl Life Cycle

Cut and stick the pictures in the correct order to show the life cycle of a barn owl.

### Eggs hatch

After 32 days, the eggs hatch.

### Fledgling

Barn owls fledge or grow wings and feathers for flying at 10 weeks.

### Adult barn owl

Barn owls mate for life and live for around two years.

### Egg

A female barn owl will lay 5 to 10 eggs. Only 1 or 2 will hatch out.
