The length of a baby crocodile is measured from its head to its tail.  
The head of the baby crocodile is 10 cm shorter than its body.  
The body of the baby crocodile is 16 cm shorter than its tail.  
The length of its tail is the same as the total length of its head and its body.  
How long is the baby crocodile?

**Draw it out to help  
you find the answer.**
