

# Thaumatrope Template

## Instructions:

- Cut carefully around the template and fold along the dotted line in the centre.
- Glue the two sides together and punch a hole through the two dots on either side.
- Attach some string through each hole, making sure it's secure enough for when you stretch it out.
- Twist the string by flipping the disk round then pull and the disk will spin, making the bird appear as though it is in the cage.
